WARNING: If the information in these instructions is not followed exactly, a fire or explosion may result causing property damage, personal injury or loss of life.

- Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

- WHAT TO DO IF YOU SMELL GAS
  - Do not try to light any appliance.
  - Do not touch any electrical switch; do not use any phone in your building.
  - Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
  - If you cannot reach your gas supplier, call the fire department.
  - Installation and service must be performed by a qualified installer, service agency or the gas supplier.
  - In the Commonwealth of Massachusetts, a carbon monoxide (CO) detector shall be installed in the same room as the appliance.

ATTENTION : CES INSTRUCTIONS DOIVENT DEMUERER AVEC LE PROPRIÉTÉRÉ D’UNE MAISON.
AVERTISSEMENT: Assurez-vous de bien suivre ces instructions données dans cette notice pour réduire au minimum le risque d’incendie ou d’explosion ou pour éviter tout dommage matériel, toute blessure ou la mort.

- Ne pas entreposer ni utiliser d’essence ni d’autres vapeurs ou liquides inflammables dans le voisinage de cet appareil ou de tout autre appareil.

- QUE FAIRE SI VOUS SENTIEZ UNE ODEUR DE GAZ:
  - Ne pas tenter d’allumer l’appareil.
  - Ne touchez à aucun interrupteur. Ne pas vous servir des téléphones se trouvant dans le bâtiment où vous trouvez.
  - Appelez immédiatement votre fournisseur de gaz depuis un voisin. Suivez les instructions du fournisseur.
  - Si vous ne pouvez rejoindre le fournisseur de gaz, appelez le service des incendies.
  - L’installation et l’entretien doivent être assurés par un installateur ou un service d’entretien qualifié ou par le fournisseur de gaz.

This appliance may be installed in an aftermarket, permanently located, manufactured home or mobile home, where not prohibited by local codes.

This appliance is only for use with the types of gas indicated on the rating plate. A conversion kit is supplied with the appliance.

INSTALLER: Leave this manual with the appliance.
CONSUMER: Retain this manual for future reference.
THIS OWNER’S MANUAL PROVIDES INFORMATION TO ENSURE SAFE INSTALLATION AND EFFICIENT, DEPENDABLE OPERATION OF YOUR FIREPLACE INSERT. PLEASE READ THESE INSTRUCTIONS IN THEIR ENTIRETY AND MAKE THEM AVAILABLE TO ANYONE USING OR SERVICING THIS GAS INSERT. DO NOT ATTEMPT TO ALTER OR MODIFY THE CONSTRUCTION OF THIS APPLIANCE OR ITS COMPONENTS. ANY MODIFICATION OR ALTERATION WILL VOID THE WARRANTY, CERTIFICATION AND LISTING OF THIS APPLIANCE.

**WARNING**

HOT GLASS WILL CAUSE BURNS. DO NOT TOUCH GLASS UNTIL COOLED. NEVER ALLOW CHILDREN TO TOUCH GLASS.

**AVERTISSEMENT**

Une surface vitrée chaude peut causer des brûlures. Laisser refroidir la surface vitrée avant d’y toucher. Ne perretex jamais à un enfant de toucher la surface vitrée.

**Suggested Tools for Installation and Service**

- External regulator (for Propane only)
- Piping which complies with local code
- Manual shut-off valve - T-Handle required in Massachusetts
- Sediment trap - if required by code
- Tee joint
- Pipe wrench
- Pipe sealant
- 10 mm open end wrench
- 1/2", 7/16" open end wrench
- Phillips head screwdriver
- Flat head screwdriver
- 1/4" nut driver
- Gloves
- Safety glasses
- Torx T-20 screwdriver
- Tin snips

We recommend that our gas products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Gas Specialists.

**Canada**

**ENERGUIDE**

Gas Fireplace Energy Efficiency Rating

69.8%

*Based on CSA R4.1-02*

Model No.  Jøtul GF 600 DV II
# Jøtul GF 600 DV II Firelight
## Direct Vent Gas Heater

Manufactured and Distributed by:
Jøtul North America
Gorham, Maine U.S.A.

### Test Standards

**DO NOT ATTEMPT TO ALTER OR MODIFY THE CONSTRUCTION OF THE APPLIANCE OR ITS COMPONENTS. ANY MODIFICATION OR ALTERATION WILL VOID THE WARRANTY, CERTIFICATION AND LISTING OF THIS APPLIANCE.**

### Stove Setup
Inspect the stove for damage and contact your dealer immediately if any is found. Complete the installation steps in the following order:

1. Remove the Grille and Top Plate. Simply lift these parts from the stove body.
2. Remove the Glass Panel. Disengage the two spring latches at the top of the firebox and lift the frame up and out of its channel. Set it aside, on a soft surface.
4. Install Vent System / Adjust Exhaust Restriction as appropriate. Page 8.
10. Replace Glass Panel. Test Burner and adjust air shutter if necessary.
11. Replace Front Panel and Top Plate.
13. Install optional Remote Control or Thermostat.

Jøtul GF 600 DV II Firelight Specifications

Input Rates

Natural Gas
40,000 BTU/hr. maximum input
23,900 BTU/hr. minimum input

Propane
40,000 BTU/hr. maximum input
20,300 BTU/hr. minimum input

Inlet Pressure: MIN MAX
Natural Gas: 5.0 WC (1.24 kPa) 7.0 WC (1.74 kPa)
Propane: 12.0 WC (2.99 kPa) 14.0 WC (3.23 kPa)

Manifold Pressure: MIN MAX
Natural Gas: 1.2 WC (0.30 kPa) 3.5 WC (0.95 kPa)
Propane: 2.9 WC (0.72 kPa) 11.0 WC (2.74 kPa)

Piezo Ignitor / Standing Pilot
Weight: 260 lbs.

General Information

- THIS HEATER MUST BE INSTALLED AND MAINTAINED BY A QUALIFIED SERVICE AGENCY.

- The installation and repair of this appliance must be done by a qualified service person. Failure to properly install and maintain this heater could result in an unsafe or hazardous installation, which may result in a fire, explosion, property damage, personal injury or loss of life.

- This appliance should be inspected before use and at least annually. More frequent cleaning may be required due to excessive lint from carpeting, bedding material, etc. It is imperative that control compartments, burners, and circulating air passageways of the appliance be kept clean.

- THIS APPLIANCE MUST NOT BE CONNECTED TO A CHIMNEY OR FLUE SERVING ANY OTHER APPLIANCE.

- The installation must conform to local codes. Your local Jøtul dealer can assist you in determining what is required in your area for a safe and legal installation. Some areas require a permit to install a gas burning appliance. Always consult your local building inspector, or authority having jurisdiction, to determine what regulations apply in your area.
Glass Front

Do not operate this appliance with the glass front removed, cracked, or broken. Replacement of the glass should be done by a licensed or qualified service person. Only remove glass for routine service. Always handle glass carefully.

Optional Blower Kit 156000

This appliance must be electrically connected and grounded in accordance with local codes or, in the absence of local codes, with the current NFPA 70-National Electric Code of CSA C22.1 - Canadian Electrical Code.

The blower must be plugged into a grounded outlet. See page 21 for complete instructions.
Installation Requirements

Mobile Home Installation

The GF 600 DV II Firelight can be installed for use in a mobile home in the U.S. and Canada provided:

1. The stove is secured to the floor of the mobile home. Use Jøtul Floor mounting kit #750304.
2. The stove is installed in accordance with Title 24 CFR, Part 3280- Manufactured Home Construction and Safety Standard, in the U.S. Comply with CSA Z240.4, Gas Equipped Recreational Vehicles and Mobile Housing, in Canada.
3. Always contact your local officials about installation restrictions and requirements in your area.

Location

In selecting the location, the aesthetic and functional use of the appliance are primary concerns. However, proper venting systems and access to the fuel supply are also important issues. Due to the high surface temperatures, you must also consider the proximity of traffic areas, furniture, draperies, etc.

This appliance may be located on or near conventional construction materials. HOWEVER, always maintain the proper clearances to combustibles, as this provides adequate ventilation air around the appliance.

The following clearances and hearth requirements are the minimum requirements when installing the Firelight gas stove near or on combustible surfaces. Always provide adequate access around the appliance for servicing and proper operation.

A combustible surface is anything that can burn (i.e. sheet rock, wall paper, wood, fabrics etc.). These surfaces are not limited to those that are visible and also include materials that are behind non-combustibles.

If you are not sure of the combustible nature of a material, consult your local fire officials. Remember, “Fire Resistant” materials are considered combustible: they are difficult to ignite, but will burn. Also, “fire-rated” sheet rock is considered combustible.
Hearth Requirements

The Firelight gas stove CANNOT be installed directly on carpeting, vinyl, linoleum or wood laminates, such as Pergo®.

If this appliance is to be installed on any combustible material OTHER THAN WOOD, a floor pad must be utilized that is either metal, wood or a listed hearth pad. This floor protection must extend the full width and depth of the appliance. It is not necessary to remove the carpeting, vinyl or linoleum from underneath the floor protection. See Fig. 1.

Figure 1. Minimum Hearth Protection

Stove and Vent Clearance Requirements

Minimum Clearances: See figs. 2-3.

Rear: 2” (51 mm) from Rear Shroud
Ceiling: 30” (762 mm) from Stove Top
Corner: 3” (76 mm) from Stove Top
Sides: 3” (76 mm) from Stove Top

Minimum Clearances from the Vent Pipe to Combustibles:

Horizontal Run:
Off the top of the pipe - 2” (51 mm)
Off the sides and bottom - 1” (25 mm)

Vertical Run:
All sides 1” (25 mm)

ALCOVE SPECIFICATIONS:
Maximum Alcove Depth: 24” (61 cm)
Minimum Alcove Width: 36” (91 cm)
Minimum Ceiling Height: 61” (155 cm)

Figure 2. Parallel Installation Clearances, measured from Top Plate.

Figure 3. Corner Installation Clearance, measured from Top Plate.

Figure 4. Mantel and Trim Clearances: As tested, with back of stove located 2 in. minimum from fireplace face.
Venting Requirements

There are three types of venting configurations approved for use with this appliance:

- Vertical Venting (Vertical Termination)
- Hearthmount Co-Linear (Vertical Termination)
- Horizontal Termination (Horizontal Termination)

The Jøtul GF 600 DV II Firelight is approved for use with the 4/6 direct vent systems listed below. Use parts of one manufacturer only – DO NOT MIX VENT COMPONENTS FROM DIFFERENT MANUFACTURERS IN THE SAME SYSTEM.

- M&G DuraVent, Inc. (Direct Vent Pro Series)
- American Metal Products - (Amerivent)
- Security Vent Ltd.
- Selkirk Metalbestos
- ICC, Inc. (Excel Direct Vent)
- Metal-Fab, Inc.
- Bernard Delsin Mfg. (Pro Form)

Installation of any components not manufactured or approved by Jøtul or failure to meet all clearance requirements will void all warranties and could result in property damage or bodily injury.

The approved vent configurations described in this manual are derived from extensive testing under controlled laboratory conditions. Gas appliance performance can be negatively affected by variables present in the installation environment, i.e.: atmospheric pressure, strong prevailing winds, adjacent structures and trees, snow accumulation, etc. These conditions should be taken into consideration by the installer and stove owner when planning the vent system design.

IMPORTANT

- NEVER MODIFY ANY VENTING COMPONENT, OR USE ANY DAMAGED VENTING PRODUCT.
- THE GAS APPLIANCE AND VENT SYSTEM MUST BE VENTED DIRECTLY TO THE OUTSIDE OF THE BUILDING AND NEVER ATTACHED TO A CHIMNEY SERVING A SOLID FUEL OR GAS BURNING APPLIANCE. EACH DIRECT VENT GAS APPLIANCE MUST HAVE ITS OWN SEPARATE VENT SYSTEM. COMMON VENT SYSTEMS ARE PROHIBITED.

- IF VENTING SYSTEM IS DISASSEMBLED FOR ANY REASON, REINSTALL PER THE MANUFACTURER’S INSTRUCTIONS PROVIDED FOR THE INITIAL INSTALLATION.

Vertical Vent Requirements

The GF 600 DV II Firelight features a sliding shutter that allows exhaust vent restriction adjustment from outside the firebox. See fig. 5. The shutter is set in the fully open position (A) at the factory. The final position of the restriction shutter is determined by your individual vent configuration as indicated in fig. 10 on page 11. Further fine tuning can be made to compensate for draft characteristics that would otherwise interfere with proper burner performance such as low heat output, weak flame picture, or inefficient combustion.

Exhaust Restrictor Adjustment

1. Remove the Top Plate from the stove.
2. Loosen the wingnut on the Restrictor Stem and push it to the left to align with the hash marks on the exhaust manifold that correspond with the appropriate setting, (B, C, or D). See figs 5 and 9.
3. After the burner has been operating for 15 minutes, make any further adjustment in 1/8” increments until the desired flame picture is achieved. Operate the burner for 10-15 minutes between additional adjustments.
4. Tighten the wingnut and replace the Top Plate.

Figure 5. Exhaust Restriction adjustment; slide shutter stem to left to increase restriction.
Co-linear Hearthmount Installation

The GF 600 DV II Firelight can be installed using a Hearthmount Co-linear Flexible Vent System, designed for installation into a solid fuel-burning masonry fireplace. See Figures 6 and 6a.

- Refer to the vent manufacturer’s instructions for venting components and installation details.
- Installation of approved Co-linear Adapter directly off the rear of the stove. (No length of pipe prior to the adaptor).
- Only 3” listed flexible gas vent liners may be used in this installation.
- Installation of a Chimney Top Kit will provide a seal at the top of the chimney. The fireplace damper may be removed and no further block-off is required. See fig. 6.

WARNING: FAILURE TO POSITION THE PARTS AND STOVE IN ACCORDANCE WITH THESE DIAGRAMS OR FAILURE TO USE ONLY PARTS SPECIFICALLY APPROVED FOR USE WITH THIS APPLIANCE MAY RESULT IN PROPERTY DAMAGE OR PERSONAL INJURY. BE SURE TO MAINTAIN THE PROPER CLEARANCES TO COMBUSTIBLES AS DEFINED IN THIS MANUAL AND IN THE INSTRUCTIONS PROVIDED WITH EACH VENT COMPONENT.

IMPORTANT NOTICE:
THE USE OF AN EXISTING CHIMNEY AS AN AIR INTAKE IS NOT COVERED UNDER THE ANSI Z21.88-1999-CSA 2.33-M99 TEST METHODS AND RESULTING ITS/WHI PRODUCT CERTIFICATION. THE CODE AUTHORITY HAVING JURISDICTION MUST BE CONSULTED PRIOR TO PROCEEDING WITH THIS INSTALLATION METHOD.

Figure 6. Co-linear Hearthmount Vent System
Vertical Venting and Termination

The GF 600 DV II Firelight can be vertically vented through a roof or ceiling. Follow these guidelines:

- Steep roofs, nearby trees, or predominantly windy conditions, can promote poor draft or down draft conditions. In such cases, an increase to the height of the vent may improve performance.

- If an offset or elbow is necessary in the vertical rise, the vent pipe must be supported every three feet to avoid excessive stress on the offsets. Use listed Wall Straps from any of the approved vent suppliers.

- A maximum of two 90° or four 45° elbows may be used. Whenever possible, use 45° elbows instead of 90° elbows as they offer less restriction to the flow of flue gases and intake air.

- A firestop is required at every floor penetration. The opening should be framed to 10" X 10" inside dimension. A listed wall thimble is required as a firestop.

- Always maintain a minimum 1" clearance from all sides of the vertical vent system to any combustible material.

- IT IS NECESSARY to add restriction to a vertical vent installation to compensate for excessive draft. See page 8; Adjusting Vent Restriction.

- GAS VENT HEIGHT: In no case shall any discharge opening on the cap be less than 18" (457 mm) horizontally from the roof surface.

Figure 8. Vent height and clearance from adjacent surfaces.

Figure 9. Vent termination must fall within the shaded areas. Set exhaust restriction in the position appropriate to the zone in which the vent terminates.
Horizontal Termination

- **Minimum vertical rise** from the top exit position is a 24” section vent pipe. See fig. 10.

- **A horizontal vent run made directly off the rear of the stove must terminate ONLY with a 36” Snorkel Cap.**
  
  The maximum horizontal run shall include no more than a single 24” section of pipe. See figs. 11 and 11a.
  
  A single 45° Elbow may be used to offset the vent for a corner installation as in fig. 11.

- **The termination cap must not be recessed into the wall or siding.** Do not fill air space in wall around termination cap with any type of insulation.

- **Wall Cut-out:** A minimum 10” X 10” square hole is adequate for proper pipe clearance through a wall, provided the vent is positioned to maintain 2” minimum clearance at the top. A 1” minimum clearance must be maintained to combustible material around the other sides.

- **Maximum Wall Thickness:** 14 in. (356 mm)

- Any horizontal run of vent must be level or have a 1/4” rise for every foot of run toward the termination cap.

- **Installation of a Vinyl Siding Standoff is required** to prevent damage to vinyl siding between the vent cap and the exterior wall.

- The horizontal termination cap must maintain a 3” clearance to any overhead combustible projections that are 2 1/2” or less. It must also maintain a 12” clearance from projections that exceed 2 1/2”. See fig. 13.

---

**Figure 10. A vertical run in a horizontal termination must be at least 2 feet (61 cm).**

**Figure 11. Rear Exit Corner Termination, only into a 36” Snorkel. Maximum horizontal run is 24” (610 mm) with one 45° Elbow.**

**Figure 11a. Rear Exit Horizontal Termination, only into a 36” Snorkel. Maximum horizontal run is 24” (610 mm).**
Figure 12. Horizontal Termination Clearance

A = Clearance above grade, veranda, porch, deck, or balcony: 12 inches (30 cm) minimum.

B = Clearance to window or door that may be opened:
   **Min. 9 inches, U.S. / *12 inches (30 cm) CAN.
   We recommend 12 in. minimum to prevent condensation on the window.

C = Clearance to permanently closed window:
   **Min. 9 inches, U.S. / *12 inches (30 cm) CAN
   We recommend 12 in. minimum to prevent condensation on the window.

D = Vertical clearance to ventilated soffit located above the terminal within a horizontal distance of 2 feet (60 cm) from the centerline of the terminal: 18 inches (46 cm) minimum.

E = Clearance to unventilated soffit: 12 inches (30 cm) minimum.

F = Clearance to outside corner: **Min. 9 inches, U.S. / *12 inches (30 cm) CAN. We strongly recommend 12 inches, particularly where windy conditions prevail.

G = Clearance to inside corner: **Min. 6 inches, U.S. / *12 inches (30 cm) CAN. We strongly recommend 12 inches, particularly where windy conditions prevail.

H = *Not to be installed within 15 feet (4.5 m) above a meter/regulator assembly within 3 feet (90 cm) horizontally from the centerline of the regulator.

I = Clearance to service regulator vent outlet:
   3 feet (91 cm) minimum.

J = Clearance to nonmechanical air supply inlet to building or the combustion air inlet to any other appliance: 12 inches (30 cm) minimum.

K = Clearance to a mechanical air supply inlet:
   **Min. 3 feet (91 cm) above if within 10 feet horizontally, U.S. / *6 feet (1.83 m) minimum / CAN

L = Clearance above paved sidewalk or a paved driveway located on public property: 7 feet (2.1 m) minimum.

M = Clearance under veranda, porch, deck, or balcony: 12 inches (30 cm) minimum.

* In accordance with CSA B149 Installation Codes.
** In accordance with the current ANSI Z223.1/NFPA 54, National Fuel Gas Code. Note: Local Codes and Regulations may require different clearances.

A vent shall not terminate directly above a sidewalk or driveway which is located between two single family dwellings and serves both dwellings.

Only permitted if veranda, porch, deck, or balcony, is fully open on a minimum of two sides beneath the floor.

Figure 13. Termination clearance to overhangs.
Gas Pressure

Proper gas pressure provides a consistent flow of gas to the appliance and is instrumental in checking for gas leaks. The gas control valve on the stove is equipped with pressure test points for gauge connections. The gauge connections are located on the front of the valve under the Gas Control Knob. See Fig. 15. Gauge connections are identified by:

• E for inlet or supply pressure (the amount of gas coming to the valve.)
• A for manifold pressure (the amount of gas that is coming out of the valve to the burner.)

ALWAYS TEST PRESSURES WITH VALVE CONTROL KNOB SET ON HIGH.

<table>

</tr>
</tbody>
</table>
The appliance and its main gas valve must be disconnected from the gas supply piping system during any pressure testing on that system at test pressures in excess of 1/2 psig (3.5kPa).

The appliance must be isolated from the gas supply line by closing its individual manual gas shut-off valve (gas cock) during any pressure testing of the gas supply piping system that is equal to or exceeds pressures of 1/2 psig (3.5kPa).

</table>

**NOTICE:**
DO NOT ALLOW THE INLET GAS PRESSURE TO EXCEED 13.5" WC (OR 1/2 PSIG) AS SERIOUS DAMAGE TO THE VALVE MAY RESULT.

**Fuel Conversion**

The GF 600 DV II Firelight gas stove is shipped from the factory equipped to burn NATURAL GAS. Use the Fuel Conversion Kit included with the stove, to convert the burner for use with Propane. The kit contains all the necessary components needed to complete the task and ensure safe operation, including labels that must be affixed to the stove.

**CAUTION:** Before proceeding with this conversion, the gas supply must be shut off prior to disconnecting the electrical power.

**WARNING:**
THE CONVERSION KIT IS TO BE INSTALLED BY AN AUTHORIZED JØTUL SERVICE TECHNICIAN IN ACCORDANCE WITH THE MANUFACTURER’S INSTRUCTIONS AND ALL CODES AND REQUIREMENTS OF THE AUTHORITY HAVING JURISDICTION. FAILURE TO FOLLOW THESE INSTRUCTIONS COULD RESULT IN SERIOUS INJURY OR PROPERTY DAMAGE. THE QUALIFIED AGENCY PERFORMING THIS WORK ASSUMES RESPONSIBILITY FOR THIS CONVERSION.

**Conversion Kit (LPG #155893, NG # 155894)**

**Tools required:**
- 1/4” nut driver
- 1/2” & 13 mm open end wrench or deep-well socket
- Torx T20 or slotted screwdriver
- 7/16” open end wrench
- 3 mm allen wrench
- 4 mm allen wrench

**Conversion Kit Contents:**
- 1 regulator tower labeled for propane
- 3 regulator tower screws
- 1 burner orifice (3.2 mm for NG, #49 for LP)
- 1 pilot orifice (#51 for NG, #30 for LP)
- Label A - to be completed and applied to the back of the stove
- Label B - apply to the rating plate
- Small valve label - apply to valve body
- Conversion instructions

**IN CANADA:**
THE CONVERSION SHALL BE CARRIED OUT IN ACCORDANCE WITH THE REQUIREMENTS OF THE PROVINCIAL AUTHORITIES HAVING JURISDICTION AND IN ACCORDANCE WITH THE REQUIREMENTS OF THE CAN1-B149.1 & .2 INSTALLATION CODE.

**Fuel Conversion Procedure**

1. Turn off gas supply to the stove.
2. Remove the Grille and Top Plate.
3. Release the spring latches atop the firebox and lift glass assembly up and out of the stove.
4. Remove the Logset and lift out the Rear Wall Skirt and Burner Skirt, fig. 16.

![Figure 16. Lift the Rear Wall Skirt and Burner Skirts.](image-url)
5. Remove the wingnut and fender washer from the Air Shutter stem, located under the stove, directly behind the valve. See fig. 17.

6. Pull the Burner Plate forward to disengage it and the Air Shutter from the burner orifice and lift it out of the firebox.

7. Change the main burner orifice. Using a ½” open end wrench or deep-well socket, remove the burner orifice from the brass orifice holder. Replace with the orifice supplied in the kit. Tighten securely.

8. Change the Pilot Orifice. From within the firebox, pull the pilot hood off the pilot assembly. See Fig. 18. Using the 4 mm allen wrench included with the conversion kit, remove the original pilot orifice (counterclockwise). Replace with the appropriate orifice:

   - #51 for natural gas
   - #30 for propane

9. Tighten orifice into the base of the pilot assembly. Be sure the orifice is tightly secured to prevent bypass leakage. Replace pilot hood onto the pilot assembly.

10. Replace the Air Shutter over the burner orifice. Note that NG/LP designations are stamped on the sides of the shutter. Orient the shutter so that the appropriate fuel designation is on the right, facing the pilot assembly. See fig. 17a.

11. Reinstall the Burner Plate by engaging the tube with the Air Shutter. BE CERTAIN THE BURNER IS LEVEL AND SECURELY SEATED ON THE SUPPORT LEGS ON THE FIREBOX FLOOR.

12. Replace the fender washer and wingnut on the Air Shutter stem under the firebox. Secure loosely for adjustment later.

13. Replace the Rear Wall Skirt and Burner Skirt.

14. Replace the variable regulator. Using a Torx T-20 screwdriver, remove the three specialty screws from the HI/LO regulator on the front of the valve. Note: To help identify which screws to remove, refer to the new regulator in the kit. See Figure 19.

15. Remove the regulator tower and the gasket. Be sure to remove the black rubber gasket from the valve.

16. Install the new variable regulator tower from the kit. Be sure that the gasket is properly positioned and tighten screws securely.

**NEVER USE AN OPEN FLAME TO CHECK FOR GAS LEAKS.**

It is important that the correct gas pressure be established at the time of installation. For more details see the Gas Pressure section of this manual (page 13).

**ALWAYS REFER TO THE LIGHTING INSTRUCTIONS ON THE INSIDE BACK COVER OF THIS MANUAL WHEN LIGHTING THE STOVE.**
High Altitude Adjustment

The decreased atmospheric pressure of higher altitudes affects heat value of gaseous fuels. Most gas suppliers derate the gas intended for use at elevations above 2000 feet. Check with your gas supplier before performing derate adjustment to the burner. The Jøtul GF 600 DV II may be adjusted for altitude over 2000 ft. (610 - 1371 m) for natural gas. Check with your gas supplier and, if necessary, install High Altitude Adjustment Kit 155808.

DO NOT DERATE FOR PROPANE.

For the U.S:

THE DERATING KIT MUST BE INSTALLED BY AN AUTHORIZED SERVICE TECHNICIAN IN ACCORDANCE WITH THE MANUFACTURER’S INSTRUCTIONS AND ALL CODES AND REQUIREMENTS OF THE AUTHORITY HAVING JURISDICTION. THE INFORMATION STICKER MUST BE FILLED OUT BY THE INSTALLER AND ADHERED TO THE APPLIANCE AT THE TIME OF THE CONVERSION. THE QUALIFIED SERVICE AGENCY PERFORMING THIS WORK ASSUMES RESPONSIBILITY FOR THIS DERATING.

For Canada:

This unit has been tested for installation at high altitudes in accordance with Canadian test standard CAN/CGA-2.17.

THE DERATING SHALL BE CARRIED OUT IN ACCORDANCE WITH THE REQUIREMENTS OF THE PROVINCIAL AUTHORITIES HAVING JURISDICTION AND IN ACCORDANCE WITH THE REQUIREMENTS OF THE CAN1-B-149.1 AND .2 INSTALLATION CODE.

Derating Procedure

Follow Steps 1-7 of the Fuel Conversion procedure on pages 15-16 to change the burner orifice for use with Natural Gas. Use the 3.1 mm orifice supplied with the High Altitude Adjustment Kit. Instructions are also included.

INSTALLER: Fill out the appropriate information and apply the high altitude conversion label provided to the rating plate on the appliance.

For Canada:

This unit has been tested for installation at high altitudes in accordance with Canadian test standard CAN/CGA-2.17.

THE DERATING SHALL BE CARRIED OUT IN ACCORDANCE WITH THE REQUIREMENTS OF THE PROVINCIAL AUTHORITIES HAVING JURISDICTION AND IN ACCORDANCE WITH THE REQUIREMENTS OF THE CAN1-B-149.1 AND .2 INSTALLATION CODE.

High Altitude Adjustment

The decreased atmospheric pressure of higher altitudes affects heat value of gaseous fuels. Most gas suppliers derate the gas intended for use at elevations above 2000 feet. Check with your gas supplier before performing derate adjustment to the burner. The Jøtul GF 600 DV II may be adjusted for altitude over 2000 ft. (610 - 1371 m) for natural gas. Check with your gas supplier and, if necessary, install High Altitude Adjustment Kit 155808.

DO NOT DERATE FOR PROPANE.

For the U.S:

THE DERATING KIT MUST BE INSTALLED BY AN AUTHORIZED SERVICE TECHNICIAN IN ACCORDANCE WITH THE MANUFACTURER’S INSTRUCTIONS AND ALL CODES AND REQUIREMENTS OF THE AUTHORITY HAVING JURISDICTION. THE INFORMATION STICKER MUST BE FILLED OUT BY THE INSTALLER AND ADHERED TO THE APPLIANCE AT THE TIME OF THE CONVERSION. THE QUALIFIED SERVICE AGENCY PERFORMING THIS WORK ASSUMES RESPONSIBILITY FOR THIS DERATING.
Optional Controls

Wall Thermostat
Use only a 750 millivolt DC two-wire circuit thermostat, placed in the same room as the heater, typically 5’ off the floor. Avoid drafty areas or any area that may affect the accuracy of the thermostat.

The thermostat should be connected to the stove using a minimum of 16 gauge wire with a maximum length of 35 feet of wire.

Connect the two thermostat wire leads to the two left terminals on the terminal block located on the valve. Do not overtighten the connections. IT IS NOT NECESSARY TO DISCONNECT ANY OTHER WIRES. See Fig. 21.

At the thermostat, the two wires should be connected to the two connection screws on the thermostat base plate per the manufacturer’s instructions.

For thermostatic operation, the On/Off/T-Stat switch must be in the T-stat position, and the pilot light must be on.

Remote Control
When using a remote, the remote receiver should be wired to the terminal block the same way the thermostat would be. See the instructions above.

Follow the operating instructions included with the Remote Control unit.

CAUTION:
LABEL ALL WIRES PRIOR TO DISCONNECTION WHEN SERVICING THE CONTROLS. WIRING ERRORS CAN CAUSE IMPROPER OR DANGEROUS OPERATION. ALWAYS VERIFY PROPER OPERATION AFTER SERVICING THE APPLIANCE.

Optional Brick Kit 155888

CAUTION!
THE BRICK PANELS AND LOG PARTS ARE EXTREMELY FRAGILE. USE BOTH HANDS TO SUPPORT EACH PIECE AS YOU HANDLE THEM.

Carefully unpack the panels and identify the parts by the illustration, fig. 22.

1. Remove the Top Plate. Simply lift it up off of the stove body.

2. Remove the Glass Frame. Disengage the two spring latches located at the top of the firebox and lift the frame up and out through the top.

3. Install the Right Side Panel.
Position the panel, upper end first, beyond the exhaust baffle and then against the firebox wall. Slide it forward against the firebox front.

4. Install the Lower Rear Panel.
Orient the panel so that the course of three full bricks is on top.

5. Install the Left Side Panel as you did the right side. Be sure to push the panel forward, up against the firebox front.

6. Install the Upper Rear Panel.
Orient the panel so that the course of three full bricks is on top.

Follow the operating instructions included with the Remote Control unit.

Figure 21. Accessory wiring diagram.
Install the Log Set

The six-piece log set is packaged inside the firebox. It includes a bag of ember stones that simulate glowing coals when the burner is operating.

Do not handle the log set with your bare hands. Always wear gloves to prevent skin irritation from the ceramic fibers.

1. Install the Log Set and Ember Stones as shown in figures 23-28.

2. Replace the Glass Frame.
   Slide the glass frame back down against the front of the firebox until it is securely seated at the bottom. Pull the latches forward to engage with the notches in upper frame rail.

3. Replace the Top Plate and Grille.

Figure 23. Install Right Log on pins.

Figure 24. Install Rear Log on pins.

Figure 25. Install Left Log on pins.

Figure 26. Left Middle Log rests on pins. Right Middle Log rests in place.

Figure 27. Engage the Top Log with the pin in the Rear Log and rest the lower end over the Left Middle Log.

Figure 28. Loosely spread the Ember Stones over the burner plate. Take care to keep ember stones off of the pilot carry-over ports and away from the Pilot Assembly.
System Check

1. Purge the gas line: When lighting the appliance for the first time, it will take a few moments to clear the gas line of air. Once this purge is complete, the appliance will operate as described in the lighting instructions. From a cold start, it may be helpful to let the pilot light burn for 10 - 15 minutes to establish positive draft, before turning the burner on. See the inside back cover of this manual or the stove Rating Plate attached to the bottom of the stove. Subsequent lightings of the stove will not require purging the gas line unless the supply line is shut off.

2. Pilot flame: The pilot flame should be steady - not lifting or floating. The flame should be blue in color around the pilot hood, with traces of yellow toward the outer edges. The pilot flame should engulf the top 3/8" of the thermopile (to generate millivolt current) and the top 1/8" of the thermocouple. The pilot flame should project out of the pilot hood 1" at all three ports. See fig. 29.

Be certain that the burner plate is securely positioned so that the carry-over ports are aligned with the Main Pilot flame as in fig. 30.

3. Burner Adjustment: This gas stove is equipped with a variable gas control valve that provides 50% turn-down of the flame height, appearance, and heat output.

To adjust the flame between the HI and LOW setting, rotate the HI/LOW knob, located in the center of the valve face. See figs. 15 and 31.

NO SMOKE OR SOOT SHOULD BE PRESENT. CHECK LOG PLACEMENT IF ANY SOOT OR SMOKE IS DETECTED. IF SOOT OR SMOKE PERSISTS, THE AIR SHUTTER MAY NEED TO BE ADJUSTED.

Note: the more offsets there are in the vent system, the greater the need for an air shutter adjustment.

WARNING:
AIR SHUTTER ADJUSTMENTS SHOULD ONLY BE PERFORMED BY A QUALIFIED PROFESSIONAL SERVICE TECHNICIAN.

CAUTION:
DO NOT ATTEMPT TO ALTER THE FLAME APPEARANCE BY SETTING THE GAS VALVE IN ANY POSITION OTHER THAN FULLY “ON”.

Figure 29. Correct pilot flame appearance.

Figure 30. Correct pilot flame, burner alignment.

Figure 31. Flame appearance on the “high” setting after approximately 15 to 20 minutes operation.
Flame Appearance - Air Shutter Adjustment

The GF 600 DV II Firelight gas stove is shipped from the factory equipped to burn NATURAL GAS. If the stove is converted for propane, it will be necessary to adjust the air shutter on the burner tube to achieve the proper gas/air mixture. The initial air shutter settings are:

1/8” open for natural
5/16” open for propane

The air shutter can also help achieve the desired flame appearance. Generally, flame appearance is a matter of preference, however most people enjoy a warm yellowish flame.

Air Shutter Too Open - the burner will generate flames that are blue and transparent, or otherwise weak looking.

Air Shutter Too Closed - the burner will generate very long, stringy yellow flames which can result in soot deposits on the logs, on the inside walls of the appliance, and potentially on the exterior termination cap.

Sooting is caused by incomplete combustion in the flames and lack of combustion air entering the air shutter opening.

Adjust the Air Shutter: The shutter is adjusted from under the stove. The adjustment stem is secured by a wingnut and is located directly behind the gas valve toward the rear of the stove. See fig. 32. Loosen the wingnut and slide the shutter stem back to open (more air) and forward to close.

Make air shutter adjustments in small increments and wait about 15 minutes to let the fire settle in before making further adjustments. When the optimal position has been found, tighten the wingnut to secure the Shutter.
Optional Blower Kit 156000  
Installation

**DO NOT CONNECT BLOWER TO POWER SOURCE UNTIL ALL WIRE CONNECTIONS HAVE BEEN MADE.**

**CONNECT THE GAS SUPPLY TO THE STOVE BEFORE INSTALLING THIS BLOWER. USE A 90° ELBOW OFF THE GAS VALVE TO CREATE ADEQUATE GAS LINE CLEARANCE.**

- This blower must be electrically grounded in accordance with local codes or, in the absence of local codes, with the current ANSI/NFPA 70, National Electrical Code or CSA C22.1-Canadian Electrical Code.
- This unit is supplied with a three-prong (grounding) plug for protection against shock hazard and should be plugged directly into a properly grounded three-prong receptacle. DO NOT CUT OR REMOVE THE GROUNDING PRONG FROM THE PLUG.
- Always disconnect the power supply when performing any service.
- CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify operation after servicing.

![Diagram of blower kit installation](image)

**Installation Procedure**

1. Unpack and check the contents of the blower kit. Contact your dealer if any damage is evident or parts are missing. See fig. 33.
2. Attach the Snapstat Bracket to the studs located in the middle of the firebox floor using the two M6 hex nuts and a 10 mm wrench. See fig. 34.
3. Attach the Blower Bracket to the stove using the two M6 flange head hex bolts as shown in fig. 34. SHORT LEG NOTE: If using short legs, follow Step 4 to attach the blower to the bracket BEFORE attaching the bracket to the stove.

**Contents**

1. Blower  
2. Mounting Bracket  
3. Snapstat Wire Harness  
4. Control Switch Wire Harness  
5. Snapstat  
6. Snapstat Bracket  
7. M6 Flange Nuts (2)  
8. M6 X 12 Hex Head Flange Bolts (2)  
9. M6 x 12 Wingscrew (1)  
10. #8 x 1/2” sheet metal screws (4)  
11. Duct Deflector (2)

**Tools Required**

- 10 mm wrench
- Short Phillips screwdriver
- Safety goggles
- Work gloves

**Figure 33. Kit Contents - 156000 Blower**

**Figure 34. Attach Snapstat and Blower Brackets.**
Blower Operation

The optional variable-speed blower will enhance heat circulation around the firebox and out into the room. Controls are located at the left side of the rear shroud of the stove, fig. 34. The blower is controlled by a heat activated switch (snapstat) that will only function when the control switch is in AUTO setting. After the fire has been burning for a time, the snapstat will react to the heat and activate the blower. Fan speed may be manually adjusted with the rheostat knob. If the burner turns off, the blower will be shut off automatically when the stove cools down.

If automatic blower circulation is not desired, place the blower control switch in the MANUAL position.

Figure 35. Blower orientation.

4. Install the Blower: Orient the duct openings up and to the back as in fig. 35. Route the snapstat wire harness over the blower motor housing. Remove the wire ties from the controls wire harness and route it under the blower to the side. Secure the blower to the bracket with the wingscrew.

5. Attach either Snapstat wire connector to either Snapstat terminal. See fig. 34

6. Install the Snapstat by sliding it all the way into the slot in the bottom of the Snapstat Bracket as shown in figs. 33 and 35.

7. Connect the male wire harness connector to the female wire harness already installed in the stove. See fig. 33.

8. Connect power cord to outlet only after all wire connections have been made.

Figure 36. Blower Controls

Figure 37. Blower Wiring Diagram
Operation

Familiarize yourself with the controls of the GF 600 DV II Firelight. Make sure that anyone else using the appliance is also familiar with the controls and operation procedures. Always follow the Lighting Instructions on the inside back cover of this manual and also located on the Rating Plate attached to the burner assembly.

1. Once the pilot is lit, burner operation is controlled by the rocker switch located at the left rear corner of the stove. See fig. 38. Use the T-STAT position for the optional thermostat or remote control functions.

2. During the first few fires, you may notice odor and/or smoke from the stove. This is normal and results from burn-off of manufacturing residue and curing of materials. You may find it helpful to provide additional ventilation and fresh air to alleviate this condition.

3. Condensation may develop on the glass when the burner is first lit. This “fog” will disappear as the heater warms up.

4. Keep the controls and the area under the appliance free of debris, vacuum this area frequently. Always keep the appliance area clear and free from combustible materials, gasoline and other flammable liquids. The flow of combustion and ventilation air must not be obstructed.

   If a vacuum is used during any service on the stove, ALWAYS be sure the stove is cold.

5. This appliance has a continuous burning pilot flame. Exercise caution when using products having combustible vapors. Always shut-off gas supply while servicing the stove.

6. CAUTION: DO NOT OPERATE THIS APPLIANCE WITH THE GLASS REMOVED CRACKED OR BROKEN. Replacement of the glass should be done by a licensed or qualified service person. Use only replacement glass provided by your authorized Jøtul dealer. Never use any substitute materials.

   WARNING: OBSERVE CAUTION WITH THE GLASS. THE GLASS PANEL MAY SHATTER UNEXPECTEDLY IF STRUCK WITH AN OBJECT. ALWAYS HANDLE THE GLASS PANEL WITH CARE. WHEN SERVICING THE STOVE ALWAYS PULL THE GLASS ASSEMBLY STRAIGHT UP FOR REMOVAL.

7. Clean the glass only when necessary. Wipe surface with a clean, damp soft cloth. Follow with a dry, soft towel as desired. Take care not to scratch the glass surface.

   WARNING: DO NOT USE ABRASIVE CLEANERS ON THE GLASS. NEVER CLEAN THE GLASS WHEN IT IS HOT.
Maintenance

This appliance and its venting system should be inspected before use and at least annually by a qualified service technician.

IMPORTANT:
ALWAYS TURN OFF THE GAS SUPPLY TO THE STOVE BEFORE ANY SERVICE WORK IS PERFORMED ON THE STOVE.

General cleaning: The firebox should be vacuumed annually to remove any surface build up. Be sure to vacuum or wipe off the pilot assembly and burner orifice and burner plate. Also, when vacuuming the log set, be sure to handle each piece carefully as they are very fragile.

Gasket inspection: It is important that the glass gasket be inspected at least annually. Examine the rope gasket for signs of deterioration and make sure the gasket has a positive seal. This is important to prevent combustion gases from escaping into the room. Replace the gasket if it is frayed, stiff or brittle. Refer to the replacement parts list on page 26.

Blower: If the optional blower is installed, use a vacuum with soft brush attachment to clean the motor housing and area under the stove at least once per month. More frequent cleaning may be necessary if there are pets in the home.

ALWAYS DISCONNECT THE BLOWER FROM ITS POWER SOURCE BEFORE CLEANING OR SERVICING.

Glass Replacement

Use only Jøtul PN 129124 Tadpole Gasket and PN 12102633 Glass Panel for this appliance.

1. Release the spring clips at the top of the firebox and slide the glass frame up and out of the firebox.

2. Use a flat blade screwdriver to bend the two side retainer tabs up to release the original glass panel and remove it from the frame.

3. Beginning at the center of one of the long sides, wrap the new tadpole gasket material around the new glass pane, pressing the adhesive firmly against the glass surface. See fig. 39.

4. Place the glass panel within the frame oriented with the gasket seam at the bottom and the thinner side of the gasket against the frame. Carefully bend the retainer tabs back only enough to secure the glass panel. See fig. 40.

5. Replace the glass frame into the firebox.
Appendix

Ash Lip / Control Door Assembly

Tools Required:
13 mm open end wrench / M8 ash lip bolts
10 mm wrench / M6 hinge bolt

The Ash Lip attaches at the clevis points to the forward lip of the stove bottom by two M8 x 25 mm hex bolts, located in the parts bag.

The Control Door assembly attaches to the stove bottom with the right side Ash Lip bolt. Follow the steps and fig. 41 below to attach first the Ash Lip, and then the Control Door assembly to the stove.

1. Using the 13 mm wrench, attach the Ash Lip to the underside of the stove using an M6 x 25 mm hex bolt in the left-hand boss.
2. Using the other M8 x 25 hex bolt, attach the Hinge Stop of the Control Door assembly to the right Ash Lip boss, oriented as shown in fig. 41. Tighten the bolts with the wrench.
3. Adjust the Hinge bolt just snug enough to permit smooth door operation. Do not overtighten.

Figure 41.
Ash Lip and Control Door installation.

Jøtul Gas Product
Limited Lifetime Warranty

Effective January 1, 2013.
This warranty policy applies to gas products identified by Jøtul, Scan, and Atra trade names, as set forth below.

A. LIMITED FIVE YEAR WARRANTY - Cast Iron, Steel Doors, Surround Components, Firebox:
Jøtul North America Inc. (JØTUL) warrants, to the original retail purchaser, that those components of the Jøtul, Scan, or Atra Gas Stove or Fireplace specified above will be free of defects in material and workmanship for a period of five (5) years from the date of purchase. This warranty is subject to the terms, exclusions and limitations set forth in the following text.

B. LIMITED TWO YEAR WARRANTY - Burner, Burner Treatments, Firebox Panels:
JØTUL warrants, to the original retail purchaser, that those components of the Jøtul, Scan, or Atra Gas Stove or Fireplace specified above will be free of defects in material and workmanship for a period of two (2) years from the date of purchase. This warranty is subject to the terms, exclusions, and limitations set forth in the following text.

C. LIMITED TWO YEAR WARRANTY - Enamel Finish:
JØTUL warrants, to the original retail purchaser, the enamel finish on cast iron components of the Jøtul Stove or Fireplace Insert specified above against peeling or fading for a period of two (2) years from the date of purchase. This warranty is subject to the terms, exclusions and limitations set forth below.

D. LIMITED ONE YEAR WARRANTY - Gas & Electrical Components (controls, plumbing, valve, blower):
JØTUL warrants, to the original retail purchaser, that those components of the Jøtul, Scan, or Atra Gas Stove or Fireplace specified above will be free of defects in material and workmanship for a period of one (1) year from the date of purchase. This warranty is subject to the terms, exclusions, and limitations set forth in the following text.

JØTUL will repair or replace (including parts & labor), at its option, any of the above components determined by JØTUL to be covered by this warranty. You must, at your own expense, arrange to deliver or ship the component to an authorized Jøtul, Scan, or Atra dealer, who will process a warranty claim. IN ORDER TO QUALIFY FOR WARRANTY COVERAGE, JØTUL MUST RECEIVE NOTICE OF A DEFECT WITHIN SIXTY (60) DAYS OF THE DATE THE DEFECT IS FIRST DISCOVERED, OR REASONABLY COULD HAVE BEEN DISCOVERED. FOR WARRANTY COVERAGE, JØTUL MUST RECEIVE NOTICE OF A DEFECT WITHIN SIXTY (60) DAYS OF THE DATE THE DEFECT IS FIRST DISCOVERED, OR REASONABLY COULD HAVE BEEN DISCOVERED.

This warranty policy applies to gas products identified by Jøtul, Scan, or Atra trade names, as set forth below.

EXCLUSIONS AND LIMITATIONS
NOTICE: This warranty is void if installation or service is performed by someone other than an authorized installer, service agency or gas supplier, or if installation is not in conformance with the installation and operating instructions contained in this owner’s manual or local and/or national fire and building regulations. A listing of local authorized installers, service agencies and gas suppliers can be obtained from the National Fireplace Institute at http://www.nficipertified.org/.

This warranty does not cover the following:
1) Repair or replacement of parts that are subject to normal wear and tear during the warranty period or to parts that may require replacement in connection with normal maintenance. These parts include gaskets and glass (except to the extent such parts suffer damage from thermal stress).
2) Damage due to incorrect installations not in conformance with the installation instructions contained in this owner’s manual or local and/or national fire and building regulations.
3) Damage due to service performed by an installer, service agency or gas supplier, unless otherwise agreed to in writing by JØTUL.
4) Labor or other costs associated with the repair of gas controls, plumbing, burners, log set, or sheet metal firebox beyond the warranty period.
5) Damage caused by unauthorized modification, use or repair.
6) Damage to enameled surfaces caused by improper operation or misuse, including use that is not in conformance with the operating instructions contained in this owner’s manual. Such damage can typically be identified by bubbling, cracking, or discoloration of the enamel finish.
7) Costs incurred by travel time and/or loss of service.
8) Damage incurred while the Jøtul, Scan, or Atra Gas Stove or Fireplace is in transit.

IN NO EVENT SHALL JØTUL, ITS PARENT COMPANY, SHAREHOLDERS, AFFILIATES, OFFICERS, EMPLOYEES, AGENTS OR REPRESENTATIVES BE LIABLE OR RESPONSIBLE TO YOU FOR ANY SPECIAL, INDIRECT, INCIDENTAL, CONSEQUENTIAL, PUNITIVE OR OTHER SIMILAR DAMAGES, INCLUDING, BUT NOT LIMITED TO, LOST PROFITS, LOST SALES, INJURY TO PERSON OR PROPERTY, OR DAMAGES TO A STRUCTURE OR ITS CONTENTS, ARISING UNDER ANY THEORY OF LAW WHATSOEVER. ALL IMPLIED WARRANTIES, INCLUDING THE IMPLIED WARRANTIES OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE, OR OTHERWISE, ARE LIMITED IN DURATION TO THE LENGTH OF THIS WRITTEN WARRANTY. EXCEPT AS EXPRESSLY SET FORTH HEREIN, JOTUL MAKES NO ORAL, WRITTEN OR OTHER WARRANTY WITH RESPECT TO JOTUL, SCAN OR ATRA GAS STOVES OR FIREPLACES.

Some states do not allow the exclusion or limitation of incidental or consequential damages, or limitations on the length of implied warranties. Therefore, the above exclusions or limitations may not apply to you. This warranty gives you specific legal rights, and you may have other rights, which vary from state to state.

JØTUL reserves the right to discontinue, modify or change the materials used to produce the Jøtul, Scan, or Atra Gas Stove or Fireplace. JØTUL shall have the right to replace any defective component with substitute components determined by JOTUL to be of substantially equal quality and price.

The dollar value of JOTUL’s liability for breach of this warranty shall be limited exclusively to the cost of furnishing a replacement component. JØTUL shall not in any event be liable for the cost of labor expended by others in connection with any defective component. Any costs or expenses beyond those expressly assumed by JØTUL under the terms of this warranty shall be the sole responsibility of the owner(s) of the Jøtul, Scan, or Atra Gas Stove or Fireplace.

No dealer, distributor, or other person is authorized to modify, augment, or extend this limited warranty on behalf of JØTUL. NO MODIFICATION OR CHANGE TO THIS WARRANTY WILL BE EFFECTIVE UNLESS IT IS MADE IN A WRITTEN DOCUMENT MANUALY SIGNED BY AN AUTHORIZED OFFICER OF JOTUL. An authorized installer may have been provided with certain information related particularly to the Jøtul, Scan, or Atra Gas Stove or Fireplace; however, no authorized installer or other person who may service the appliance is an agent of JØTUL. No inference should be made that JØTUL has tested, certified, or otherwise pronounced any person as qualified to install or service the appliance. JØTUL shall not be liable or otherwise responsible for any error or omission by a person installing or servicing a Jøtul, Scan, or Atra Gas Stove or Fireplace.

If you believe your Jøtul, Scan, or Atra Gas Stove or Fireplace is defective, you should contact your nearest authorized Jøtul, Scan, or Atra dealer, who will process a warranty claim. IN ORDER TO QUALIFY FOR WARRANTY COVERAGE, JOTUL MUST RECEIVE NOTICE OF A POSSIBLE DEFECT WITHIN SIXTY (60) DAYS OF THE DATE THE DEFECT IS FIRST DISCOVERED, OR REASONABLY COULD HAVE BEEN DISCOVERED.

This warranty is given by Jøtul North America, Inc., 55 Hutcherson Drive, Gorham, Maine 04038 USA
Your stove has a unique serial number stamped on the rating plate which is located in the valve compartment. Please record the serial number in the space below. You may also wish to attach your purchase receipt to this manual for future reference.

LIGHTING INSTRUCTIONS
FOR YOUR SAFETY, READ BEFORE LIGHTING.

WARNING:
IF YOU DO NOT FOLLOW THESE INSTRUCTIONS EXACTLY, A FIRE OR EXPLOSION MAY RESULT CAUSING PROPERTY DAMAGE, PERSONAL INJURY, OR LOSS OF LIFE.

A. This appliance has a pilot which must be lit by hand. When lighting the pilot, follow these instructions exactly.

B. BEFORE LIGHTING, smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle to the floor.

WHAT TO DO IF YOU SMELL GAS:
• Extinguish any open flame.
• Open windows.
• Do not light any appliance.
• Do not touch any electrical switches.
• Do not use any phone in your building.
• Immediately call your gas supplier from a neighbor’s phone.

C. Use only your hand to push in or turn the gas control knob. Never use tools. If the knob will not push in or turn by hand, do not try to repair it. Call a qualified technician. Force or attempted repair may result in a fire or explosion.

D. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

1. STOP! Read the safety information above.
2. Access the valve controls in the left side compartment.
3. Turn the Burner ON/OFF switch to “OFF”, or set the thermostat to the lowest setting (if used).
4. Confirm that the gas supply line shut-off valve is open.
5. Push in gas control knob slightly and turn clockwise to “OFF”.
6. Wait five (5) minutes to clear out any gas. If you then smell gas, STOP! Follow “B” in the safety information above on this page. If you do not smell gas, go to the next step.
7. Push in gas control knob slightly and turn counter-clockwise to “PILOT”.
8. Push in control knob all the way and hold in. Immediately light the pilot by triggering the spark ignitor (push the red button repeatedly) until pilot lights. Continue to hold the control knob in for about one minute after the pilot lights. Release knob and it should spring back. The pilot should remain lit. If it goes out, repeat Steps 5 through 8.
9. Turn gas control knob counterclockwise to “ON”.
10. Set the Burner switch to “ON” to light the burner. If using a thermostat, set Burner switch to “T-STAT” and set the thermostat to the desired temperature.

TO TURN OFF GAS TO THE APPLIANCE:

1. Turn ON/OFF switch to “OFF”. The pilot will remain lit for normal service.
2. For complete shutdown, turn ON/OFF switch to “OFF”.
3. Access the lower controls.
4. Depress gas control knob slightly and turn clockwise to “OFF”. Do not force.
This appliance must be installed in conformance with local and national building regulations. It is important that these instructions be carefully read and understood before beginning the installation. Jøtul pursues a policy of continual product development. Consequently, products may differ in specification, color or type of accessories from those illustrated or described in various publications.

Jøtul vise sans cesse a améliorer ses produits. C’est pourquoi, il se réserve le droit de modifier les specifications, couleurs et équipement sans avis préalable.
